

Davide Anastasia

Technical Lead

Davide is responsible for Blis's core data solutions, ensuring the company's exceptionally high standards for location data are met including data quality, advanced analytics, audience building and reporting of any complexity.

Starting with blis as a C++ Bidder Engineer and then moving into the Data Engineering/Science space allowed Davide to gain in-depth and hands-on experience across multiple areas of the Blis' infrastructure. His expertise and dedication have allowed him to create a coherent data ecosystem that seamlessly moves large volume of information between various components.

Prior to working for Blis, Davide was working in the financial industry, building high performance order management systems for electronic trading. He has a PhD in High Performance Computing.

Outside of work, Davide plays tennis or strums one of his (many) guitars.
